

# WooCommerce PDF download and email system

## Overview:

Rebuild of checkout process using WooCommerce for:

<https://intelligentdialogue.com/training-materials/> but build on

<https://intelligentdialogue.varndev.co.uk/training-materials/> and sub pages such as

<https://intelligentdialogue.varndev.co.uk/product/choosing-your-attitude/> (these are linked to from the previous URL)

## Notes:

The system will need a currency picker that if possible uses geolocation to pick the currency. Which will either be US Dollars for the USA or Pounds Sterling for the rest of the world. There needs to be a way of manually changing location though just in case the Geo location doesn't work.

In the backend of WooCommerce, in each product, the website administrator needs to be able to add a UK and USA version (PDFs and PowerPoints) of each product/resource and there could be up to 5 documents for each product/resource.

## The process should be:

1. Click on 'Add to Basket' for example on:

<https://intelligentdialogue.varndev.co.uk/product/choosing-your-attitude/>

## Course Description

**2. View basked and Checkout:** Use standard WooCommerce checkout but need ability to add VAT number and agree to terms and conditions. Payment is using Stripe (<https://stripe.com/gb>) and they have an account for this already.

**3. Following Payment:** Once the user has paid two things should happen:

1. They are emailed unique links to download the documents, there could be up to five documents.
2. They are forwarded to a Thank You/Download page a bit like the screen grab below from their current system:
